

Design Rational

The main aim of the project is to promote my skills and let the employer know what level of effort I can put to make the thing work. I believe this design works because it is clean and easy to understand for my targeted audience. It is easy for them to navigate around my website to view my skills, education and work experiences with all the projects I have done so far. Moreover, it clearly shows my name, contact information, so that it would be easy for them to contact me.

The navigation is so simple to play around on the website and responsive too, that helps to keep the design working well in all screen size devices. The website is designed in dark mode, that is mostly preferred by most of the people, and it gives easy to read option. All the color combinations are kept on branded color combinations so that helps to build trust and is less intrusive. Finally, all the text and images are made on the size in respective to read by everyone.
